

## Ford Ranger / Mazda BT-50 Flywheel Recess

Ref: TN067

Issue date: Feb 2014

Issue number: 1

The specified flywheel dimension for this kit is minus 21mm (The recess height from cover bolt up to clutch disc contact surface).

It has come to our attention that other brands available in the marketplace possess a reduced flywheel recess (approx. 18mm). Due to this reason this EXEDY kit can only be used with EXEDY flywheel part number FMF010. The part number is located near the crank mounting surface on the transmission side of the flywheel.

Failure to check the flywheel recess prior to fitting the new clutch can result in unsatisfactory clutch operation. Normal warranty will not apply if an EXEDY clutch has been installed onto a competitor's flywheel.
