

Vibration And The Importance Of Flywheel Dowels

Ref: TN028

Issue date: 28 Nov 2007

Issue number: 1

Flywheels fitted with dowels should be treated with care. The dowels are provided to locate the cover assembly correctly to help maintain dynamic balance.

Should the dowels be omitted, vibration relative to engine RPM may result.

When resurfacing these flywheels, care should be taken when removing the dowels.

The dowels maybe reused but should be replaced if damaged.
