## AGC3194 – 330mm Upgrade

Ref: TNAG1

Issue Date: April 2017

Issue Number: 1

If the vehicle is fitted with a 320mm clutch, there is a 330mm clutch upgrade option. When fitting the 330mm upgrade the following instructions must be followed.

1. Before fitting the 330mm upgrade, the flywheel pot diameter must be increased to 331mm (13.03 inches). This should be done by accurate turning on a lathe to ensure the flywheel balance is not affected.
2. Restore the flywheel pot depth to 21.6mm (+/- 0.13mm) where necessary.

Please be aware that the vehicle may have had an increased size clutch fitted previously and may not require the above modifications.
